

A4 Rubric

Category	Points	Weight (%)	Requirements for Full Marks	Marks (/2 Each)	Section Total	Weighted	Notes
Source Sketches & Experiments	14	40%	Both source sketches are present and clearly identified		0.0	0.0	
			At least one sketch responds to mouse or keyboard input				
			At least one sketch draws many instances of something (particles, shapes, lines, etc.)				
			credits.json filled in with title, author, date, and URL for both sources				
			External files (if any) stored in /sketches folder with relative paths linked correctly				
			Sketch pasted into sketch1.js; credits.json entry complete with title, author, date, source URL				
			Sketch pasted into sketch2.js; credits.json entry complete with title, author, date, source URL				
The Remix	8	40%	remix.js combines significant elements/systems from both source sketches		0.0	0.0	
			The two systems interact or influence each other (i.e. they are not just coexisting on the same canvas)				
			Off-screen elements removed from arrays/memory (garbage collection), not just invisible; no runaway accumulation				
			Sketch resets cleanly on page refresh				
Git Workflow & Repo	14	5%	Repo named a4-generative, forked from starter repo		0.0	0.0	
			Three required branches: sketch-1, sketch-2, combine				
			10+ commits on sketch-1; 10+ commits on sketch-2; 15+ commits on combine				
			Commit messages describe what was tried and what happened; the messages are well-written (i.e. just writing "update" = mark deduction)				
			At least 5 merge commits				
			All 4 required branches pushed to GitHub				
			Live page published via GitHub Pages				
Index Page & Documentation	8	5%	• username.github.io links to: a4-remix live page and a4-remix GitHub repo		0.0	0.0	
			• 5 significant commits linked on index page, each with 1–2 sentence annotation				
			• Annotations describe what changed and why it mattered, not just what file was edited				
			• username.github.io URL submitted to Brightspace A4 page				
Code Comments	6	10%	Every significant block of code has a comment explaining what it does and why		0.0	0.0	
			Comments are meaningful, i.e. not just restating the code ("// draw circle" on ellipse() = not enough)				
			Commented-out experiments left in files to show process				
BONUS: Keypress Reset	2	5%	keyPressed() function resets the sketch AND a label on the page tells the user which key to press. Both parts required for bonus.		0.0	0.0	

Days Late?			0	0.0	
Subtotal				0.0	
Adjusted for Course Weight (/15)				0.0
